## UVBioTek™ home systems were the right fit for them...

“This machine made it easy for me to be consistent with my treatments, and as a result now I’m 99% free of psoriasis.”  
— Leslie D., New York

“Having a UVBioTek™ home system has saved me countless hours traveling to a hospital facility.”  
— Carol R., New York

“The unit is well-designed and easy to use...my choice of wood paneled doors fits nicely with surrounding furniture.”  
— George B., Texas

# UVBioTek™ Home Phototherapy System

Patented, flexible design folds flat against the wall when not in use

Panels can be arranged in multiple positions to best treat problem skin areas

Doors come in your choice of attractive design patterns, including wood grains and other laminate styles

Goggles included with every system

DataControl™ module, with backlit LCD, controls all system functions

Built-in safety features continuously monitor your treatment to protect you from overexposure

# Free yourself from the constraints of conventional UV light treatment with a UVBioTek™ home phototherapy system

Since it was first developed in the early 1900s, phototherapy (sometimes called “light therapy”) has become an increasingly popular and effective treatment for psoriasis, vitiligo, and other skin conditions. But until recently, phototherapy has meant frequent and inconvenient trips to your doctor’s office that often conflict with your busy schedule. Today, UVBioTek™ can put the power of phototherapy in your own hands—and in your own home! UVBioTek™ home systems are truly designed to fit the way you live.

## Fits your home and style

Each unit folds flat against the wall when not in use. And door panels come in your choice of attractive wood grains and other laminate designs.

If you have certain skin conditions, such as psoriasis, you know how they can interfere with your life. But these conditions don’t have to get in the way of the things you love, and neither does your treatment. This is where UVBioTek™ can help. Unlike other phototherapy systems, each UVBioTek™ home system folds flat against the wall when not in use. So it’s there for you when you need it, and out of your way when you don’t.

With UVBioTek™ systems, door panels also come in your choice of attractive wood grain or other selected laminate patterns at no additional cost. So whether your style is traditional or contemporary, you can be sure that your system will fit your home’s decor.

## Fits your treatment needs

The patented, flexible design allows you to arrange the panels around your body in a position that best treats your affected skin area.

Thanks to our patented design, UVBioTek™ home systems add a whole new dimension to phototherapy and that can make a big difference in the effectiveness of your treatment. UVBioTek™ systems feature a flexible configuration, so no matter your shape or size, you can arrange the panels closer to your body. Also, you can precisely position the light panels to address difficult-to-treat areas.

Allowing the panels to get closer to your problem areas reduces your treatment time and helps you get the most out of your therapy. This unique flexible design is especially beneficial if you need to treat multiple areas on your body.

## Fits your schedule and budget

Having a home unit means more control over your treatment. And since home systems are covered by most insurance, you'll save time and money!

The key to successful phototherapy is maintaining a routine treatment schedule. But in your busy life, it can often be hard to find the time. Having a phototherapy system at home means you only go to the doctor's office FOR ROUTINE CHECKUPS AND when you need ADDITIONAL HELP. It also means a more simplified treatment plan, which can make an improvement in your quality of life.

When prescribed by a doctor, all UVBioTek™ home systems are usually covered by insurance. In fact, insurance companies generally pay around 80% of the cost of our home systems. But even if you don't have insurance, a number of convenient payment options can help you get the system you need.
